

Enterprises on JSC

This document contains a brief outline of the enterprise partnership and validator opportunities available for Japan Smart Chain.

Applications on JSC

Japan Smart Chain invites blockchain-adjacent applications to build on JSC, especially use-cases in payments, gaming, loyalty systems, identity and real world assets. In 2025, JSC will be inviting developers, start-ups and other enterprises to build on the JSC Testnet. If you are interested in developing on JSC, please sign up for updates on our website, or contact us with a brief description of your application idea or product at:

developers@japansmartchain.com

Mizuhiki Attestors

Mizuhiki Attestors play a vital role in the Japan Smart Chain ecosystem, by ensuring that Japan-based customers can easily interact with Japan Smart Chain applications securely and safely. Mizuhiki Attestors will provide attestation services for IDs, licenses and other nationally recognized certifications, and may include universities and other trusted institutions in Japan. Registrations of interest will be available on the Japan Smart Chain website in 2025.

JSC Vision Partner

The JSC VP program provides a small group of committed companies the opportunity to guide the vision and specifications of Japan Smart Chain to align it with the wider enterprise and regulatory ecosystem in Japan. The JSC Vision Partner program provides enterprises with early onboarding and technical guidance, with the aim of having Vision Partners become leading JSC ecosystem participants as validators, token holders, and/or project operators.

Delegate Validator

A delegate validator is a medium to large corporation in Japan that shares the technical and/or staking responsibilities with other registered parties in Japan. Delegate validators may initially require technical assistance from third parties, including but not limited to AltX Research.

Full Node Validator

A full node validator runs one of 21 available nodes on Japan Smart Chain. Due to the high standard of technical and security requirements for full node validator operation, full node slots will be limited to Japan's top Nikkei 100 companies at launch.
